

reloadly pulse

How to use

Internal user guide · reloadly-tasks.github.io/task-manager

What this guide is for

Reloadly Pulse is our internal strategy + execution platform. Everyone at Reloadly uses it. This guide gets you productive in 10 minutes — what each module does, what to do as your role, and the everyday workflows that keep us aligned.

Quick reference

Dashboard	Overview of company-wide task counts, charts, recent activity.
Strategy	OKR cascade from Company to Department to Individual. Forecasts, attention center, mindmap.
OKR Tracker	Quarterly OKR creation and progress editing. The source of truth for what we're committed to.
Tasks	Unified task management. My Work (focus + today + overdue), Team, Board (Kanban), Timeline, Manager. Quick add (press N).
Roadmaps	Product roadmap. Now / Next / Later + Timeline. Features link to KRs and Initiatives.
My Tasks	Shortcut → Tasks page filtered to your personal list. One click home.
Performance	Performance reviews, scorecards, 9-box, org tree.
Reminders	Upcoming task and reminder feed.
Activity Log	Audit trail of every action across the platform.

Your first 10 minutes

1. Sign in at reloadly-tasks.github.io/task-manager with your Reloadly email.
2. Click My Tasks in the left sidebar. This is your home base — focus card at top, then Today / Overdue / This Week / Later.
3. Press N anywhere on the Tasks page to add a task. Describe it, hit Enter. The defaults are smart.
4. Click Strategy / Individual and set your quarterly Individual OKR. Link it to a Department or Company KR so leadership sees the chain.
5. Click Roadmaps / Now-Next-Later for the company-wide product story this quarter.

1. Strategy

How company OKRs cascade to every team and every person. Use this view to set commitments, see what's at risk, and find what needs your attention.

The four viewpoint tabs

-
-
-
-

How to set an Individual OKR

6. Strategy → People → find yourself → click + Set Individual OKR.
7. Pick a parent: a Department Objective or a Company Objective.
8. Title the objective and add 1–N Key Results (baseline, target, unit, direction, confidence).
9. Save. Progress now rolls up into the cascade your manager and the CEO see.

Tip

The Attention Center on Overview triages issues into Critical / High / Medium. Look there first when starting your week.

2. OKR Tracker

Where the quarterly OKRs are created and edited. Strategy reads from here; you write here when planning a new quarter.

Common actions

-
-
-

Note

OKR Tracker writes are non-destructive — every Strategy view reflects what you change here within seconds.

3. Tasks

Replaces the old department spreadsheets. One unified page with five views. Department becomes a dropdown filter, not a tab.

The five tabs

-
-
-
-
-

Creating a task

10. Press N anywhere on the Tasks page, OR click the bright + New task button in the header. Both open the same modal.
11. Type the task description. Defaults will fill in (you as owner, your dept, Planned priority, due in 7 days).
12. If you want to override: click + More details to expand Owner / Department / Priority / Due / Link to OKR.
13. Hit Enter (or Create task). Done — it lands on your My Work list under the right horizon group.

Editing a task

14. Click any task card → slide-in drawer.
15. Edit Owner, Priority, Due, Status, Progress, Notes (now a comfortable size), or Link to OKR via the searchable picker.
16. Save. Card reflects the change immediately.

Linking a task to a Key Result

17. In the new task modal OR in the drawer, click the Link to OKR button.
18. Search by KR id or title — KRs are grouped by department.
19. Pick one. A purple ☐ KR-ID chip appears on the task card and stays bidirectionally synced with the OKR Tracker.

Priority + Health (what the dots mean)

-
-

Pro tip

The Focus card uses a scoring algorithm: blocked × 100 + overdue × 60 + due today × 40 + Urgent × 30. It tells you, with no debate, the one thing to do next.

4. Roadmaps

Product roadmap module. Where Features are planned, scheduled, and linked to strategy.

The hierarchy

Theme → Feature → Initiative → Task. Themes group features strategically (e.g. "Improve Customer Experience"). Features are the discrete things shipped. Initiatives + Tasks come from Strategy / Tasks — no duplicate hierarchies.

The three tabs

-
-
-

Creating a feature

20. Click + New feature (bright green button, top-right of the Roadmaps page).
21. Title it. Pick a theme, horizon, target quarter, owner. Create.
22. Drawer opens automatically. Add description, impact + effort (1–5 each), risks, link to a KR (purple picker), link to existing initiatives (search), confidence level.
23. Save. The feature appears in Now/Next/Later and Timeline.

Why this matters

Every feature linked to a KR means leadership can see strategy → roadmap → delivery → outcomes as one chain. That's the whole point of Pulse.

5. Performance

Performance reviews, scorecards, 9-box talent matrix, and the org tree. Same module as before — Pulse keeps it but ties it back to OKR delivery, not feelings.

Most-used flows

-
-
-

By role

Same product, different daily flows. Find your role here for the workflow that takes you ~5 minutes per day.

Individual contributor	My Tasks (daily focus) → Strategy / Individual (set + track your OKRs) → Roadmaps (read-only context).
Team lead	Tasks / Team and Tasks / Board (squad view) → Strategy / Department (your dept's chain) → Roadmaps / Now-Next-Later.
Department head	Strategy / Department (forecast, attention center) → Tasks / Manager (workload + analytics) → Roadmaps (delivery plan).
Executive (COO / CRO / CEO)	Strategy / Company (health, forecast, top attention items) → Roadmaps (Now / Next / Later) → Performance (talent picture).

FAQ

Where's my data stored?

For now, in your browser's localStorage. Strategy nodes, tasks, themes, and features live in keys like `rl_strat_nodes_v1`, `rl_tasks_v4`, `rl_rm_themes_v1`. When Reloadly cloud sync ships, it migrates automatically — nothing you need to do.

Two browsers, two views?

Yes. Until cloud sync ships, each browser is its own copy. Use the same browser on the same laptop for now. This is the single biggest motivator for the Reloadly-backend phase.

What changed if I'm used to Task Manager?

- The 5 dept tabs are gone. One unified Tasks page replaces them.
- Priority labels changed: Critical → Urgent, High → This Week, Medium → Planned, Low → Backlog. Old data migrates automatically.
- Charts moved to the Manager tab (admin-only). Employees see action, not analytics.
- Cards replaced spreadsheet rows. Click a card → drawer for editing.

How do I report a bug?

Ping Dren. Bugs get fixed within the day for anything user-facing.

Is there mobile?

The current build is responsive. A true mobile-first layout is in the next phase — bottom nav, swipe-to-complete, FAB for new tasks.
